

A close-up photograph of a pine tree branch. The needles are sharp, green, and pointed. Several flower buds are visible, some fully open with a bright orange-red color, while others are still green and closed. The background is blurred, showing more of the same pine branches.

Nature

- MOSS -

Moss is found throughout the world, and is common in the Australian Bush.

Moss prefers moist to wet environments, though some species of all three can survive in drier temperatures for periods of time.

Can you help identify any of these outstanding natural wonders?

Any help appreciated.

MOSS

Moss is a botanical division of small soft plants that are typically no larger than 10 cm, though some larger specimens can be found.
